Profile summary

Dedicated Software Engineer with experience in Full Stack Development, Machine Learning, and Web3 Technologies. Skilled in building scalable applications with experience leading development teams and delivering production-ready solutions. Strong research background with the ability to quickly adapt to new technologies and solve complex problems. Fast learner passionate about building scalable and efficient software solutions.

Education

University of Moratuwa, Sri Lanka

2021– 2025

BSc. in Engineering (Hons), Computer Science and Engineering

Minor in Mathematics, Second Class Upper Division

Sujatha Vidyalaya, Matara

2010– 2019

G.C.E A/L 2019: Physical Science Stream

3A Passes

Sujatha Vidyalaya, Matara

2010– 2016

G.C.E O/L 2016

9A Passes

Publications

ScheduleMe: Multi-Agent Calendar Assistant | PACLIC 2025

Dec 2025, Hanoi, Vietnam

- O. Wijerathne, A. Nimasha, D. Fernando, N. de Silva, S. Perera. *ScheduleMe: Multi-Agent Calendar Assistant*. Proceedings of the 39th Pacific Asia Conference on Language, Information and Computation (PACLIC), pages 309–319. Association for Computational Linguistics.
- [ACL Anthology](#) , [arXiv](#)

Industrial Experience

Metarune Labs

Jul 2025 – Present

Software Engineer

Full-time

- **Heystream — Live-streaming platform (Team Lead)**
 - * Led live streaming feature development with Livepeer and Stripe/PayPal monetization.
 - * Built creator and viewer dashboards with subscription management and real-time chat.
 - * Tech stack: React, NestJS, Livepeer, Clerk, Stripe, PayPal.
- **Bitcoin Graffiti — On-chain pixel art platform (Team Lead)**
 - * Developed Ink Token economy for pixel art creation and trading using Bitcoin Computer smart contracts.
 - * Integrated Lightning Network for real-time payments and marketplace transactions.
 - * Tech stack: React, TypeScript, NestJS, Bitcoin Computer, Lightning Network.
- **Automation Team — Internal Workflows**
 - * Automated company internal workflows and repetitive processes using n8n.
 - * Integrated third-party services to streamline operations and reduce manual effort.
- **BeatFarm — Decentralized music marketplace**
 - * Developed artist dashboard and marketplace features for music token minting and Bitcoin Ordinals integration.
 - * Implemented on-chain royalty enforcement and smart contract development for all music sales.
 - * Tech stack: React, NestJS, TBC framework, TypeScript, IPFS/Pinata.
- **Wanderlust — Location-based social app**
 - * Built real-time GPS tracking, social feed, and NFT inscription system.
 - * Implemented Bitcoin & Web3 integration including Xverse wallet authentication and transactions.
 - * Enabled users to inscribe photos as Bitcoin Ordinals NFTs and manage their ordinal collections.
 - * Tech stack: React Native, Mapbox, Convex, Clerk, Bitcoin/Ordinals API.
- **AG Marketplace — Mobile automotive marketplace**

- * Implemented vehicle listing, search filters, real-time messaging, and notifications.
- * Developed multi-step listing creation flow with Cloudinary media management.
- * Integrated Google Maps for location-based search and discovery.
- * Tech stack: React Native, Expo, TypeScript, Convex, Clerk, Google Maps API.

Metarune Labs

Associate Software Engineer

Jun 2024 – Jul 2025

Part-time

- **Web3STR — Decentralized live-streaming platform (Team Lead)**
 - * Led the team for platform UI/UX, token-gated subscriptions, and NFT-based ticketing.
 - * Integrated Solana wallet authentication and creator dashboards.
 - * Tech stack: Next.js, NestJS, TypeScript, Solana wallet adapters, Livepeer.

Metarune Labs

Software Engineer Intern

Dec 2023 – May 2024

Full-time

- **Chainwork — Decentralized Fiverr-like platform**
 - * Built front-end UI components and integrated real-time chat.
 - * Developed platform features connecting clients and service providers.
 - * Tech stack: TypeScript, TailwindCSS, Next.js, WebSockets.

Selected Github Projects

LLM-based Travel Planner [GitHub] [Research paper] | FYP group Project

- Designed a hierarchical multi-agent system using GPT-4o for personalized travel itineraries.
- Implemented supervisor-agent orchestration coordinating calendar, data retrieval, planning, and feedback agents.
- Built generate-evaluate-refine pipeline with rule-based scoring for constraint-aware itinerary optimization.
- Integrated APIs and datasets for flights, hotels, restaurants, and attractions with LangChain tools.
- Tech stack: Python, LangChain, LangGraph, GPT-4o, Multi-Agent Systems, API integration.

AI-powered Calendar Assistant [GitHub] | FYP Project

- Built a scalable AI calendar assistant with LangChain/LangGraph, FastAPI, and Redis.
- Implemented dynamic agent orchestration with distributed state management and supervisor failover.
- Integrated Google Calendar API with conflict detection, undo/redo, and real-time Streamlit interface.
- Designed horizontal scaling with Nginx load balancing across multiple supervisor instances.

Real-time Chat Application [GitHub] | Personal Project

- Developed Angular 19 frontend with real-time messaging (SignalR) and peer-to-peer video/voice calls (WebRTC).
- Implemented JWT-based authentication, user management, typing indicators, and call history.
- Built progressive web app with offline support, notifications, and modern UI using Angular Material and Tailwind CSS.
- Backend: .NET 10 with SignalR, Entity Framework Core, SQLite/SQL Server support, Dockerized deployment.

AI for IT Operations Monitoring Stack [GitHub] | Personal Project

- Implemented full-stack monitoring with Prometheus, Grafana, Node Exporter, and ML-based anomaly detection.
- Developed Python ML scripts using IsolationForest for proactive anomaly detection.
- Enabled live anomaly detection, alerting, and visualization dashboards for CPU, memory, and disk metrics.
- Tech stack: Python, Docker, Prometheus, Grafana, IsolationForest.

React Gaming Platform [GitHub] [Demo] | Personal Project

- Built responsive web application with React 18, TypeScript, Vite, and Tailwind CSS.
- Implemented reusable component architecture, strict TypeScript types, and Husky Git hooks for code quality.
- CI-ready formatting/linting pipelines.

Clinical Decision Support System for Tumor and Cancer Detection [GitHub] | Academic Project

- Developed React frontend for MRI image upload and result visualization with explainability heatmaps.
- Built Flask backend handling image preprocessing, model inference, and API endpoints for predictions.
- Integrated existing deep learning models for accurate brain tumor detection.

Certifications

- Docker - SWARM — SERVICES — STACKS - Hands-on, KodeKloud (Issued Feb 2026)
- GitHub Actions Certification, KodeKloud (Issued Sep 2025)
- GitLab CI/CD: Architecting, Deploying, and Optimizing Pipelines, KodeKloud (Issued Sep 2025)
- GitHub Copilot in Action, KodeKloud (Issued Sep 2025)
- Multi AI Agent Systems with crewAI, DeepLearning.AI (Issued Mar 2025)
- Long-Term Agentic Memory with LangGraph, KodeKloud
- Amazon Elastic Container Service (AWS ECS)
- Introduction to Agile Development and Scrum, IBM (Issued Dec 2024)

Volunteering / Leadership

- **Editor**, IEEE Signal Processing Society Student Branch, University of Moratuwa (Oct 2023 – Jan 2025)
- **Assistant Event Organizer**, IEEE Signal Processing Society Student Branch, University of Moratuwa (Jan 2023 – Oct 2023)
